PLACEMENT

Preparing for placement is really a big and important task. Getting placement in your dream company or any other MNC is one of the primary goals of every fresh graduating student. Here are some helpful points that will help you to prepare for placements.

Given below are some resources where you can find the best opportunity to grab placement.

- **College campus:** your college will help you to get placement
- **Amcat** online exam: you can give test here on their portal and they will generate score card. from your score card they will help you by providing companies. For more information you can visit <https://www.offcampusjobs4u.com/amcat/>.
- **LinkedIn:** If you are not on linkedin, so please make an account and active be on linkedin. It's like an Instagram or facebook for the job seekers.
- **Naukri.com:** Just apply and register with your skills and you will get mail from them that certain vacancies according to your skills are available.
- **Telegram and whatsapp groups:** You can also look for other placement drives from these resources.
- **Cocubes :** It helps institutes measure and improves the employability of students. It **increases employment opportunities by managing placements**. Candidates who complete the test and meet the minimum criteria of assessment will be given job offers

Never depend on only one resource of placement so, here are many resources.

Coming to the preparation part:

There are mainly three rounds

1. Aptitude Test.
2. Technical Interview.
3. Human resource (H.R) interview.

Note:

1.Sometimes they do take group discussion so, also be ready for this round.

2.They might take 2 H.R round

1.Aptitude TEST: This might include any combination below topics.

- Aptitude: Here are the topics with their respective syllabus in the link.
 1. Quat: <https://prepinsta.com/learn-aptitude/>
 2. Logical: <https://prepinsta.com/learn-logical-reasoning/>
 3. Verbal: <https://prepinsta.com/learn-verbal-english/>
 4. Data interpretation: <https://prepinsta.com/learn-data-interpretation/>

- Coding: they will ask you to run the code according to problem statement.

2. Technical Interview: They will ask you about all the technical skills you have mentioned in your resume or you will speak to the interviewer. You can prepare for this round according to your skills. On the basis of your known languages and skills they will encounter you.

Tip: never lie in your resume and never misguide interviewer with over skills. In case it is found you are lying then this is decreasing chance of getting selected.

Points to be remembered.

1. You should at least know basic language like C, c++, Java or python or both And SQL.
2. For impressive impression you can select any framework like android or react js or any other.
3. You should also have to implement some minor and major projects as this shows that you are curious about language and its implementation and are capable enough to implement them practically.
4. Internship: Try to have an internship as this shows that you already have the working experience and have knowledge in a particular language.
5. Technical interviewer basically looks for all the technical skills you have and then checks your knowledge according to skills by questioning basic question. You can prepare questions from google for particular skills as there are basic and most repeated questions interviewer can ask to the person sitting in front of him/her.
6. Prepare your technical interview according to company for example if a company works on the language like java so prepare yourself so well in java and try to highlight your specialty in java.

3. Human resource (H.R): This round is used to know the candidate willingness to work for company and also they verify

1. for how much time you can serve to them.
2. how you are a good asset to them.
3. fit for company or not.
4. There are many basic questions that are common and asked by every H.R interviewer. Some of them are
 1. Tell me about yourself
 2. What are your weaknesses and strengths?
 3. Why should we hire you?
 4. Why shouldn't we hire you.
 5. Where do you see yourself in 5 years?
 6. Are you ready for night shifts or working on weekends to complete the urgent deadlines?
 7. Will you leave this company for some other company offering with higher package?
 8. What do you know about the company or latest news about the company?
 9. Bond Agreement (if any).
 10. Questions based on projects you did.
 11. What you did in lockdown?

I have prepared another article for the rounds like technical and H.R. please click on the link below.

<https://github.com/lokeshbhavsar/Interview-and-Placement/blob/2dc886b86f65718872414fec60533b6a908e418a/How%20to%20prepare%20for%20interview.pdf>

TIP: The journey of getting placement requires lots of courage and hard work. It demands perseverance, consistency, patience

Perseverance: It is normal thing to get rejected. Accept that rejection and move on and work hard for next company. Never compare yourself with any of classmates or any other friend who are getting placed.

Consistency: after getting rejection from 5 to 10 companies you will lose your mind and will not think to study same thing again and again. Never do these things and prepare more harder for next company.

Patience: keep patience with you and look company according to your worth. For example, if you can earn 4.5 LPA job so, why to settle for 3.8 LPA job or below 4.5 LPA job.

Search for the companies that comes and accordingly and then apply for them.
